

XCEL STAFF UNDERGO IPC/J-STD TRAINING

XCEL are pleased to announce that they have invested in a major production training programme. Two key production staff – David Waller and Adriana Buvalova – have successfully achieved certification to IPC-A-610 and J-STD-001 CIT which qualifies them to carry out the specialist instruction/training required for Certified IPC Specialist (CIS) production operatives.

This extensive training programme has now been completed and results in all relevant staff at XCEL being certified to the required competencies for these Standards.

"XCEL is fully committed to investing in training and equipment that will improve the services they offer their customers as well as improving the quality of the end product" commented Richard Weller, Managing Director. "All relevant staff are now fully certified to IPC-A-610 and J-STD-001 CIS and thus the quality of our products is further enhanced. We have also reviewed our supply chain and will be involved in training our suppliers operatives in the near future, again improving the ultimate quality of the product we supply to our customers".
