## **XCEL in full production with Eurofighter Typhoon Contract**

XCEL Power Systems Ltd are now in full production with a contract won last year for new products worth over \$750,000 from BAE Systems, Electronic Warfare Division.

The contract is for the production of power conditioning modules for BAE Systems' Towed Decoy equipment, and follows the successful completion of a co-operative development programme between the two companies. The decoy equipment forms part of the Defensive Aids Sub System (DASS) suite of Electronic Warfare products for the Eurofighter Typhoon, and will be subjected to some of the most strenuous environmental conditions when deployed during operations. Production deliveries are already under way, for incorporation with Tranche 1 of the Eurofighter programme (120 aircraft), with further commitment expected soon for the recently agreed Tranche 2 requirement for 236 aircraft

**Commenting on the contract, Richard Weller**, General Manager of XCEL Power Systems Ltd, stated "We are pleased to have been involved in the development of another power supply for the Eurofighter DASS suite – this will be the fourth design completed by XCEL for this programme. The environmental specification imposed some of the harshest vibration requirements we have seen for any application, and I am delighted to say that the XCEL design has been successfully tested, trialled and brought into production - both on time, and on cost."
